English Abstract: US6234054B1 2001-12-04 Process and machine for coating conductive lenses

English Abstract: In a process and machine for coating a surface of an optoelectronic lens, the lens is manually loaded by the operator into a ready-to-coat holder and an enclosure of the coating machine. Thereafter, the machine controller controls the entire process. The machine is closed to minimize the introduction of contaminants into the process.

English Abstract: US6234054B1 2001-12-04 OPTICAL LENS COATING APPARATUS AND METHOD

English Abstract: A method and apparatus for batch, continuous or semi-continuous coating of optical lenses which use a plurality of cartridges which are respectively moved to transfer lens from a jig fitted cartridge to a lens coating arm (11) and to load the jig with lenses.

English Abstract: US6234054B1 2001-12-04 Optical lens coating apparatus and method

English Abstract: A method and apparatus are provided for batch, continuous or semi-continuous coating of optical lenses. The method and apparatus use a plurality of cartridges which are respectively moved to the apparatus to transfer lens from a jig fitted cartridge to a lens coating arm and to load the jig with lenses.

English Abstract: US6234054B1 2001-12-04 Process for preparing Antireflective Hard-Top Layer by Laser Coating and Contact Articles Having Enhanced Anti-Fog and Durability Properties

English Abstract: Described are processes for preparing articles having anti-fog properties, comprising providing a substrate having at least one main surface coated with an intermediate coating obtained by spraying and at least partially curing an intermediate coating composition comprising at least one...
